

MMM Group

FRIOCELL, CLIMACELL

Laboratory incubators

Incubators for testing of stability and photostability, experimental growing of plants, ...

protecting human health

FRIOCELL

with forced air convection and cooling

The high technical standard of our FRIOCELL incubators allows exact incubation processes both for variation and deviation. The units have very short recovery times and show an excellent manner in keeping the precise regulation.

A unique cooling system ensures, that the samples are not dried while cooling. A high performance system of lighting ensures outstanding homogenous parameters for tests and growth conditions. These devices are designed for use in biotechnology, botany, food processing industry, pharmacy, cosmetics, chemical industry etc.

CLIMACELL

with forced air convection, cooling and controlled humidity

The CLIMACELL series was specially developed for applications, in which as far as possible exact and reproducible simulation of various environmental conditions is important, e.g. stability testing of components, packaging materials, food or chemicals, drugs, germination studies, plant cell or tissue cultures, insect cultures.

This device offers an interesting alternative to expensive testing chambers and testing rooms. Microprocessor/controlled humidity assembly with powerful lighting system are warranty of excellent homogeneous parameters for tests and grow conditions.

Options

- cooling from -9,9°C (applied to CLC in unregulated humidity only)
- internal lighting – a wide offer of various luminary sources (excluded volume 22 and 55 liters) – wide offer of various light sources – either in the door or on the shelves
- access ports Ø 25, 50, 100 mm (Ø 100 mm is not available for 22-litres volume)
- automatic door lock
- left door versions (excluded volume 22 and 707 liters)
- timer programmable water protected inner socket
- exposure/stimulating lighting (white/day light) digitally adjustable 10–100 %
- exposure illumination in shelves, especially for photo-stability tests (e.g. according to ICH Q1B Guideline)
- illumination measuring UV, VIS
- BMS relay alarm contact
- independent PT100 sensor
- special software WarmComm
- stainless steel casing of the device

Incubators designed for testing of stability and photostability, experimental growing of plants, ...

Devices are in accordance with directions EU 2006/95/EC, 2004/108/EC.

Devices also meet the highest requirements for the photostability tests, according to the ICH guidelines Q1B, option 2 and the European norms.

Cultivating and testing chambers FRIOCELL and CLIMACELL equipped with the exposition light create optimal conditions for plant growth and cultivating of the tissue cultures under the natural conditions. Excellent automatics enables easy programming and offers a wide range of parameters for simulation of day and night (adjustment of air circulation, humidity and lightning).

- wide range of volume 22 up to 707 litres
- various light colours for different purposes (fluorescent)
- fully programmable intensity of the light – microprocessor dimming (0–100%, steps 10%)
- UV or VISIBLE light on-line measurement with data evaluation (display/printer/PC)
- high temperature and humidity homogeneity due to patented double jacket vertical ventilation system
- reflective surfaces in lighting modules made of high/shine stainless steel for higher efficiency of lighting
- minimalisation of condensation in chamber due to efficient airflow system
- flexible position of the lighting and loaded shelves
- vertical construction of the chamber – saves the space in the laboratory
- smart “smiley” design brightens your laboratory

Illustrative photo of use in door or exposition light on trays

Technical Data

Volume: 22, 55 (only FRIOCELL), 111, 222, 404, 707 litres

Working temperature: without humidity 0 °C up to 99.9 °C, FC 22 5 °C–70 °C
with humidity: 10 °C up to 90.0 °C
with light: see table

Refrigerant: R 134a – without CFC (excluded volume 22 litres)

Manual defrosting assembly

Peltier cooling – FC 22

Inner glass door

Interior: stainless steel, mat. No. 1.4301 (AISI 304)

Only for CLIMACELL

Source medium for generating the humidity:

a) drinking water (max. 50 mg Ca/l) – not applied to Climacell with an injection steam generator

b) distilled water

Controlled humidity: 10 %–90 % RH

Microprocessor humidity assembly

Type of standardly installed fluorescent: Luxline Plus – Cool White 840

Light intensity: max 20 000 lx – shelves, max 13 000 lx – door

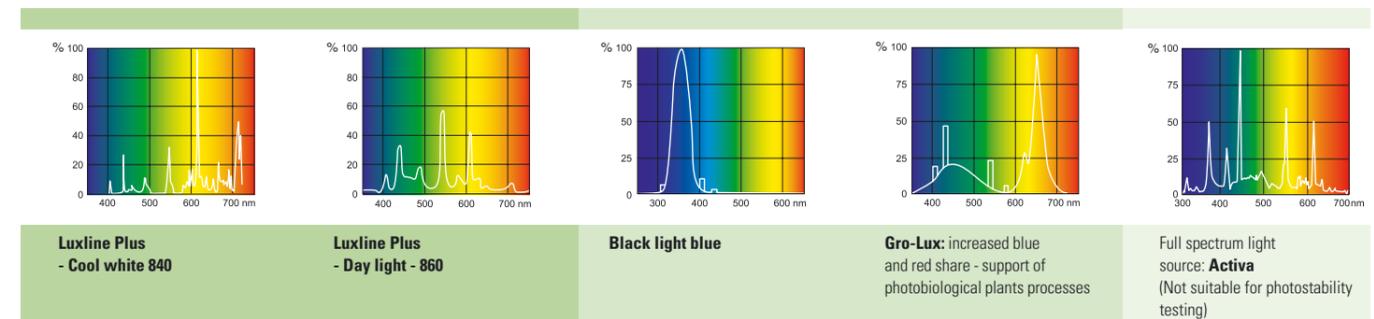

Comfort line

- 6 programs
- chip card system for individual program storage
- RS 232 – interface for printer or PC-communication
- delayed heating start and stop function
- acoustic and visual alarm in error state
- time range 0–40 years with 1 min-intervals
- digital safety thermostat
- real time
- selectable rate of temperature increase or decrease – “RAMPS”
- programming of program time segments – “SEGMENTS”
- programme cycles
- adjustable ventilation rate 10 to 100 %
- keyboard blocking

All technical parameters are related on empty chamber (without samples on sieves), 20–22°C local temperature, ventilator speed 100 %, supply voltage 230 V + 10%. Range of the humidity control is limited according to the data in the user manual for CLIMACELL. The real photometry-values is necessary to measure during the test with an independent measurement device. Our products FRIOCELL and CLIMACELL fulfill all demands (temperature accuracy/homogeneity range and accuracy and light intensity/and spectrum range) for all stability and foto stability testing according the internationally valid European norms and the pharmaceutical ICH guidelines Q1A R (except point 2.2.7.5 – storage in freezer – and point 2.2.7.6 – storage below minus 20 °C) and ICH Q 1 B, option 2.

Readily types of light sources

Light sources may not be for all chamber sizes and versions available.
