

The following flow charts are of guidance only

LIQUID (H₂O @ STP) FLOW CHART FOR SERIES 161T03x & 225T03x

LIQUID (H₂O @ STP) FLOW CHART FOR 2-WAY SERIES 360T & 648T

Note, that the flow between a C (Common) and NC (Normally Closed) port on a 3-way valve is always somewhat less, than the flow between the C and NO (Normally Open) ports. The flow of a 2-way valve (both NC and NO) is comparable to the flow between the C and NO ports on a similar size 3-way valve. Furthermore, 225T04x, 360T04x, and 648T04x valves have internal parts and flow rates of a one size smaller valve, i.e. 161, 225, and 360, accordingly.
