

Standard 1/4-28 Inline Check Valves

- ▶ Add back-flow protection to any 1/4-28 flat-bottom port
- ▶ 15 psi (1 bar) and 3 psi (0.2 bar) cracking pressure versions
- ▶ Excellent chemical resistance
- ▶ Materials of construction: PEEK; PCTFE; perfluoroelastomer; PTFE (CV-3301 and CV-3302); stainless steel (CV-3301 and CV-3302); or gold-plated stainless steel (CV-3315 and CV-3316)

Connect these Upchurch Scientific® Inline Check Valves to any 1/4-28 flat-bottom port. Then thread your 1/4-28 flat-bottom fitting into the check valve to connect the tubing. Once installed, the spring-actuated sealing system eliminates back flow, helping to prevent upstream contamination or damage. In addition, the unique design of this product eliminates the additional tubing cuts and connections required to install conventional inline check valves.

Nonmetallic 10-32 Micro-Volume Inline Check Valve

- ▶ Cracking pressure of 8 psi (0.6 bar)
- ▶ Excellent chemical resistance
- ▶ Materials of construction: PEEK and perfluoroelastomer, suitable for biological applications

With a swept volume of only 7.4 μ L, the Upchurch Scientific Inline Micro-Volume Check Valve is perfect for applications where low flow path volume is critical, such as delivery to lab-on-a-chip, single-cell analysis and micro- or nano-LC post-column derivatization. Once installed, this check valve helps prevent back flow and the potential for contamination or damage to sensitive upstream equipment.

NOTE

Check valves are specified by:

- ▶ **Cracking Pressure:** the pressure required for the valve to open in the direction of the arrow.
- ▶ **Maximum Pressure:** the maximum pressure the valve can experience in the reverse direction without leaking backwards.
- ▶ **Back Pressure Created:** the amount of back pressure generated by the check valve with 50 mL/min room temperature water flowing in the direction of the arrow.
